

In LogicGate, you have a next generation GRC platform. In Agile GRC Solutions, a partner with intimate knowledge of your business needs. It's the combination to help you move beyond your outdated GRC system.

## A Smooth Migration

LogicGate partners with Agile GRC Solutions to oversee a frictionless platform migration. We recognize that moving data, processes, reporting, and access control to a new system presents a daunting challenge. Don't navigate these waters alone.

## No Data Left Behind

We know how important data is to your business. During the migration, you'll always know that your data is secure thanks the following services:

- **Legacy Data Export:** With help of Agile GRC Solutions experts, you will have a dedicated guide to oversee the transference of data from your current system to LogicGate.
- **Data Mapping:** We ensure complete mapping of all fields currently in use within LogicGate workflows.
- **Data Exchange with Third Party Platforms:** We ensure that existing data feeds or integrations can be replaced with LogicGate or middleware applications. This is made possible through SOAP or REST APIs.

## Replication of Your Existing Processes

- **Process Mapping:** The processes that you leverage today are seamlessly transferred to the appropriate use case processes in LogicGate, with no duplication.
- **Access Control:** To maintain continuity of access rights and entitlements tied to mission critical processes, we diagram your access control schema and replicate it in LogicGate.
- **Reports and Dashboards:** We document all current data sharing and reporting capabilities to maintain consistency in communication with key stakeholders.

## A Trusted Partner

Agile GRC Solutions boasts two decades of deep GRC domain experience. Combine that with their hands-on knowledge of the LogicGate platform, and you have a partner who can offer expert guidance throughout your migration.

It's time to get better visibility, scalability, and reporting from your GRC solution. With LogicGate and Agile GRC Solutions, you'll do GRC better.
